Many studies have shown links between urban agriculture activities and various benefits in health, social, economic, and ecological domains. The diagram illustrates these connections through icons and symbols, indicating the strength and nature of the relationships. For instance, activities such as beekeeping, composting, and rainwater harvesting are linked to health benefits like access to healthy food and physical activity. Social benefits include empowerment and mobilization, as well as youth development and education. Economic benefits are represented by local economic stimulation, job growth, and food affordability. Ecological benefits include awareness of food systems ecology and biodiversity & habitat improvement.
